AccountMate Introduces Latest Version of Its Entry Level Accounting System

(May 1, 2019) (Petaluma, CA) The hallmark of the AccountMate ERP software manufacturer is the constant stability and continuing enhancements to their products. The release of AccountMate 10 for LAN is the latest version upgrade to this product line.

There are some highly-requested enhancements that are being introduced in AccountMate 10.1 for LAN. The majority of these enhancements were a direct result of suggestions from our AccountMate Solution Providers and their clients. Some of these changes and enhancements include the support of barcodes in warehouse inventory transfer and receiving as well as the capability to cancel backorder quantities during receipt of goods. For mass cancellations, it is available now in open sales quotes and open purchase quotes. This works especially well now that a client can separately track sales and purchase quote approval date and quote/order dates.

Within the AccountMate Payroll Module, there have been significant support to handle applications and printing of checks for employees with multiple state transactions, exempting certain employees from additional state taxes, new W-2 categories, and improved tracking of employee-salary history. Handling payroll is made more efficient with each AccountMate LAN product release.

Many changes have been made throughout the AccountMate 10 for LAN 20+ modules. This highly regarded mid-market financial system continues to retain loyalty of its thousands of clients. David Dierke, President and CEO of AccountMate is quoted, "the premise of our AccountMate solutions are that they can be used by companies with or without customization. Modification of AccountMate 10 for LAN is yet another example of the flexibility that our clients have become used to expand the efficiencies to grow their business".

About AccountMate
