

FMIS Fixed Asset Management

Product Description

The FMIS Fixed Assets Management System is powerful, easy-to-use fixed asset accounting software with the flexibility to handle complex asset information in any industry and across multiple companies, countries, and books.

FMIS Fixed Assets is part of the FMIS comprehensive asset management suite that includes tracking, maintenance (CMMS) and asset accounting. Designed for accounting professionals, the Fixed Assets module automates fixed asset accounting calculations including depreciation and amortization for regulatory and tax purposes.

With FMIS, you can automatically depreciate property, plant and equipment across multiple books, entities or currencies for any period or range of periods.

The software saves you time and simplifies year-end. Close down periods faster with accurate up-to-date data. Generate all general ledger postings quickly and accurately.

FMIS provides extensive reporting and search facilities for assets and equipment giving full visibility of tracked depreciation, transfers, impairments, revaluations and disposals of fixed assets.

Company Profile

FMIS has been pioneering industry-leading Asset Management systems for 35 years. Our asset management solutions offer comprehensive asset tracking, accounting and maintenance in over 40 countries internationally.

FMIS software is used extensively by both the private and public sectors and gives companies the tools to manage their assets and equipment more efficiently. The FMIS suite includes Asset Tracking, Fixed Asset Accounting, Lease Accounting, Equipment Maintenance and Inventory management.

KEY FEATURES
